Summary

Full Stack Developer who takes end-to-end ownership of web applications — from schema design to cloud deployment. I build with the user in mind first, and the codebase second: clean APIs, intentional component architecture, and backend logic that holds up under real-world conditions. Currently deepening my craft across the MERN stack, I'm drawn to engineering cultures that value continuous improvement, thoughtful tradeoffs, and software that actually solves problems.

Skills

Frontend: React.js, Javascript(ES6+), HTML5, CSS3, Responsive UI Design.

Backend: Node.js, Express.js, REST API Design, Authentication and Authorization.

Database: Mongoose, MongoDB, Cloud Deployment(Render, MongoDB Atlas).

Workflow: Git, GitHub, Component-Driven Development.

Practices: Debugging, Code Refactoring, Performance Optimization, SDLC.

Experience

Frontend Developer (Remote)

August 2025 – September 2025

CODTECH IT Solutions

Tools Used: ReactJS, Javascript, HTML5, CSS3

- Developed responsive frontend interfaces using **React.js** and **CSS3**, improving UI consistency across desktop, tablet, and mobile devices throughout the software development lifecycle.
- Refactored existing component structure to eliminate redundant code, reducing **duplication by an estimated 25%** and improving readability for future feature development.

Projects

LendLoop – Access Economy Platform | Full Stack (MERN)

March 2026 – May 2026

- Designed and developed a full-stack web application with **8+ RESTful APIs**, implementing MongoDB schema design across 3 collections to support scalable rental booking workflows
- Engineered a complete booking lifecycle system with **Pending, Approved, and Rejected** status management, dynamic rental duration selection, automatic total cost calculation, and a simulated payment workflow.
- Integrated **Cloudinary** and **Multer** for cloud-based image handling, and deployed the application on **Render** with **MongoDB Atlas** as the production database establishing a live, publicly accessible full-stack deployment.

Wanderlust–Airbnb-Style Full Stack Web Application | (Node.js, Express, MongoDB)October 2024 – December 2024

- Built and deployed a secure full-stack web application using **MVC architecture**, implementing role-based authentication with **Passport.js**, **session management**, and **ownership-based authorization** to ensure application security.
- Implemented **Joi**-based server-side validation across 7+ input fields, custom ownership-check middleware, and cascading deletes on user and listing removal — preventing orphaned records and maintaining database integrity throughout the application lifecycle.

Certifications

- **Legacy Responsive Web Design V8 – freeCodeCamp 2025:** Completed a 300+ hour Responsive Web Design certification covering 20+ projects focused on accessibility, layouts, and modern CSS.
- **Web Development Fundamentals – IBM SkillsBuild 2025:** Completed structured training in HTML, CSS, JavaScript, and professional web development workflows.

Education

B.E Computer Engineering

Graduated: 2026
