Summary

MERN Stack Developer who takes end-to-end ownership of web applications — from schema design to cloud deployment. I build with the user in mind first, and the codebase second: clean APIs, intentional component architecture, and backend logic that holds up under real-world conditions. Currently deepening my craft across the MERN stack, I'm drawn to engineering cultures that value continuous improvement, thoughtful tradeoffs, and software that actually solves problems.

Skills

Frontend: React.js, Javascript(ES6+), HTML5, CSS3, Responsive UI Design.

Backend: Node.js, Express.js, REST API Design, Authentication and Authorization.

Database: Mongoose, MongoDB.

Deployment: Render, Vercel, Cloudinary, Third-Party API Integration.

Workflow: Git, GitHub, Component-Driven Development, SDLC.

Practices: Debugging, Code Refactoring, Performance Optimization.

Projects

LendLoop – Access Economy Platform | *Full Stack (MERN)* **March 2026 – May 2026**

- Architected a full-stack **MERN** rental platform across **3 backend route modules** (User, Product, Booking), designing **MongoDB schemas** to support structured rental workflows covering authentication, product listings, and booking management.
- Engineered core business logic for a complete booking lifecycle covering rental duration selection, status tracking (**Pending, Approved, Rejected**), automatic cost calculation, and a **4-step simulated payment workflow** using Node.js and Express.js.
- Integrated third-party APIs (**Cloudinary, Multer**) for cloud-based image management and deployed the full-stack application to a production environment using **Render and MongoDB Atlas**, making it publicly accessible end-to-end.

ShelfSense – Smart Expiry Tracking & Inventory Monitoring System | *(MERN Stack)* **April 2025 – July 2025**

- Built a full-stack **MERN** inventory monitoring platform with automated shelf-life calculation, classifying products across **4 expiry states** (Safe, Expiring Soon, Urgent, Expired) to alert users before stock spoils or expires.
- Implemented secure **JWT-based authentication** and authorization across **4 protected routes**, alongside product search, personalized inventory management, and real-time expiry alerts across **8 RESTful API endpoints**.
- Designed a responsive **React** dashboard with **5 real-time analytics cards** (Total, Safe, Expiring Soon, Urgent, Expired), automated expiry notifications, and product management shortcuts, deployed to production via **Render, Vercel, and MongoDB Atlas**.

Certifications

- **Legacy Responsive Web Design V8 – freeCodeCamp 2025:** Completed a 300+ hour Responsive Web Design certification covering 20+ projects focused on accessibility, layouts, and modern CSS.
- **Web Development Fundamentals – IBM SkillsBuild 2025:** Completed structured training in HTML, CSS, JavaScript, and professional web development workflows.

Education

B.E Computer Engineering

Graduated: 2026

Alamuri Ratnamala Institute of Engineering and Technology
